Construction Start: Summer 2013  
Construction Completion: Fall 2013

## P21015 South 59th and Aster Drainage Improvements

*Project Description: The current stormwater sewer system does not have the capacity to convey stormwater from large rain events creating flooding situations over South 59<sup>th</sup> Street and adjoining properties. This project consists of construction of approximately 400 feet of 42-inch reinforced concrete pipe to connect two existing stormwater sewer systems. Completion of this project will resolve a system capacity issue, minimize risk and liability and will reduce maintenance costs.*

For questions regarding this project you may contact the Project Leader below.
