P21082 Booth Kelly Building Repair

Project Description: This project is for the repair (or removal) of the covered loading dock for Building D Suite 188 following a full engineering evaluation to determine the extent of roof and structural issues. Once all issues are fully identified this project is intended to repair the structure to a usable condition or to remove it if repairs do not have an acceptable cost to benefit determination. Repair is the desirable solution as it is a beneficial asset to the suite and can aid in getting and retaining a tenant.

For questions regarding this project you may contact the Project Leader below.
