P21083 Booth Kelly Water Isolation and Repair

Project Description: This project is to hire a consultant/contractor to study the plumbing infrastructure at the Booth Kelly Complex. We will use this project to analyze and locate the poorly documented piping system at the site, and isolate the location of water leaks that are currently wasting both water resources and utility funds. This project is key to future development at Booth Kelly to make sure that we can properly serve our tenants, reduce waste and dry out soils for possible future expansions and/or upgrades of the facility.

For questions regarding this project you may contact the Project Leader below.
