Modelling: Summer 2013

P41019 Over / Under Channel Investigation

Project Description: The Over/Under Channel Investigation intends to survey the existing stormwater nodes, pipe sizes, pipe materials and contours of the open channel sections of the stormwater basins tributary to what is called the "Over/Under Channel". This information will be used to create a model by which stormwater flows can be calculated in order to determine needed upgrades to the system. This investigation will be used in conjunction with the recommendations in the 2008 Stormwater Facility Master Plan.
