

DON'T FEED THE WILDLIFE

If you love the wildlife, keep them and their habitat safe by not feeding them.

FEEDING WILDLIFE IS HARMFUL

Regular feeding can cause:

- Poor nutrition.
- Spread of bacteria and disease.
- Unnatural behavior including aggression.
- Pollution.
- Overcrowding.
- Delayed migration.

SHOW THAT YOU CARE

Instead of feeding them, enjoy viewing them in their natural habitat from a distance, knowing that is best for the animals and helps reduce harmful bacteria concentrations in our waterways.

Please help spread the word!
